

The SSRS Opinion Panel Can Help Mental Health Researchers...

Reach Nationally Representative Samples of U.S. Adults who Receive **In-person Mental Health Services**

Field Surveys with U.S. Adults who Have Seen a Mental Health Professional **In-person, via Telehealth, or Both**

Compare Adults Who Receive Mental Healthcare Regularly v. Less Often

We Can Measure and Assess Mental Healthcare Utilization in the Context of Factors and Stressors Like:

Experiencing Economic Insecurity

Experiencing Moderate to Severe Food Insecurity

Employment Status

Living in a Military Household

Social Media Use & News Consumption

Children Under 18 Living in the Household

Large Enough Samples of Adults Who Have Received Mental Healthcare to Compare the Experiences of:

Men and Women

Lower-income v. Middle- and Higher-income Adults

Young Adults v. Middle-aged Adults and Seniors

Different Racial and Ethnic Groups

Ask us about external data we can append to panelists, such as their local EPA air quality data.
